

Komodo Edit Preferences

To match Instructor, Leigh Cotnoir's tutorial settings, find your Komodo Edit Preferences and set them according to the panes in this pdf.

This version was created with Komodo Edit v.9.2.0.

Windows: "Edit > Preferences"

Mac: "Komodo Edit > Preferences"

Code Intelligence

Code Intelligence refers to the system that provides autocomplete, calltips, and the Code Browser.

- Enable automatic autocomplete and calltip triggering while you type
- Enable autocomplete fill-up characters
'Fill-up' is where typing a certain character — like '{' or '.' — during an autocomplete session will trigger insertion of the current completion before the character itself is inserted.
- Automatically insert end tag when typing start tag in HTML/XML documents

API Catalogs

Komodo uses API catalogs to provide autocomplete and calltips for 3rd-party libraries. Check the libraries that you use in your code.

Note: Selecting all API catalogs for a particular language can lead to confusing results.

<input checked="" type="checkbox"/>	Name	Language	Description	
<input type="checkbox"/>	dojo	JS	JavaScript Dojo Toolkit API - version 1.5.0	
<input type="checkbox"/>	Ext_30	JS	JavaScript Ext JavaScript framework - version 3.0	
<input checked="" type="checkbox"/>	HTML5	JS	JavaScript HTML5 (Canvas, Web Messaging, Microdata)	
<input checked="" type="checkbox"/>	jQuery	JS	JavaScript jQuery JavaScript library - version 1.9.1	
<input type="checkbox"/>	Komodo	JS	JavaScript Komodo JavaScript API - version 0.2	
<input type="checkbox"/>	MochiKit	JS	JavaScript A lightweight JavaScript library - v1.4.2	
<input type="checkbox"/>	Prototype	JS	JavaScript JavaScript framework for web development	
<input type="checkbox"/>	YUI	JS	JavaScript YUI JavaScript support - version 1.0

Global Indentation Settings

Auto-indent style:

- Auto-adjust closing braces
- Show indentation guides
- Allow file contents to override Tab and Indentation settings
- Prefer Tab characters over spaces
- Number of spaces per indent
- Width of each Tab character
- 'Backspace' decreases indentation in leading whitespace

Smart Editing

Wrap long lines by:

Draw the edge line column

Edge line column:

Enable soft characters

Inserts closing characters or matching delimiters. For example, when entering '(', automatically add a closing ')' after the cursor.

Cut/Copy with no selection will cut/copy the current line

Auto-Abbreviations

Enable Auto-Abbreviations, with Trigger Characters:

Hyperlinks

Enable hyperlinks (underlining of text under mouse pointer)

Enable hyperlinking to definition

Folding

Fold mark style:

Restore fold state on document load (slows down file opening)

Variable Highlighting

Automatically highlight variables when clicking

Automatically highlight variables when typing

Prefix match when typing

Minimum length for automatic highlighting:

Only show results that are in scope (if available)

Track Changes

Enable Change Tracking in the editor margin

Web & Browser

Which browser should Komodo use when opening URLs?

Preview in Browser

Which method should be used to preview files in the browser?

- Preview in Komodo tab, other Split View
- Preview in Komodo tab, same Split View
- Preview in a separate Komodo dialog
- Preview in external browser (specified above)

Save changes before previewing?

When starting a preview on an unsaved file:

Connection

Configure HTTP Proxy settings for how Komodo connects to the Internet for updates, HTML Preview, etc.

Manage certificates that Komodo will accept for HTTPS connections
