

Quick Quiz: HTML Basics

MAT-125

8/31/2016

What does HTML stand for?

```
<a href="http://yahoo.com">Go to Yahoo!</a>
```

What is this part of "speech" called?

```
<a href="http://yahoo.com">Go to Yahoo!</a>
```

And what is this one called?

```
<a href='http://yahoo.com'>Go to Yahoo!</a>
```

Okay, what about this one?

In your own words, explain what semantic HTML is and why we should use it.

Semantic HTML is code structure whose tags have meaning imbued within them. It gives an underlying meaningful structure to the content, allowing screen readers to interpret formatting (and therefore meaning) for blind people. It also helps search engines return useful results.

Which portion of a web page's code is related to "structure" and which part of the code is related to "presentation"?

Code "Structure" =

Code "Presentation" =

What are two NON-semantic HTML tags?

1.

2.

Do you your best to briefly explain why you might use these:

Name at least **three** tags/elements that are **REQUIRED** for valid HTML markup.

(If you can name them all, awesome!)

1.

2.

3.

4.

5.
